

# 10ft Wide Kingsbury Cedar Greenhouse

## Base information

- For concrete and slab bases, we require a minimum of 50mm of base protruding from each side of the greenhouse
- Concrete pads should be at least 4 inches thick, plinths 6 inches thick
- For brick and concrete plinths, the external dimensions of the plinth should be the same as the greenhouse
- If the base is too large, this can cause water to move towards the greenhouse and to seep underneath the building

**\*\*For an ideal base, the protruding area should be sloping away 10mm\*\***

*Bases must be flat and level, if not we may not be able to install, and a surcharge may be incurred for a second site visit*

**\*\*Dimensions show greenhouse external measurements only\*\***
